

# PEATS COMMERCIAL LANDSCAPE MULCH

Cost effective for  
larger projects

## FACT SHEET

Peats Commercial Landscape Mulch was developed as a cost effective mulch with low levels of contaminant for use on larger landscaping and mulching projects.

**Valuable time and money spent in removing contamination can be eliminated or significantly reduced.**

Peats Commercial Landscape Mulch is produced by processing recycled materials such as trees, woody material and sawdust. Extra processing ensures contamination levels are minimised resulting in a much cleaner product.

Lend Lease and Wilson & Co Landscape have used the product extensively . The Managing Director of Wilson & Co Landscape, John Wilson said that "Lend Lease are very happy with the end result." John is now using the mulch on other jobs around the state.

John's leading hand Bob said,

*"This is the best mulch I have used in my 25 year career. We are getting jobs done twice as fast because it is so easy to move and spread.*

*It looks great and we don't have to pick contamination after."*
